PROFESSIONAL SUMMARY

Machine Learning Developer and Data Scientist with expertise in building scalable AI products, specializing in RAG systems and search optimization. Demonstrated success in developing innovative solutions that drive business growth, with a track record of improving search accuracy by 30% and reducing retrieval latency by 40%. Experienced in full-cycle product development from conception to deployment.

EXPERIENCE

ML Developer

ConvoSearch

Oct 2024 - Present

Remote

- Built a conversational search pipeline integrating **retrieval-augmented generation (RAG)**, enhancing query relevance and improving search accuracy by 30%.
- Implemented neural embeddings for advanced information retrieval, reducing retrieval latency by 40%.
- Designed a conversation memory system for multi-turn queries, improving user retention metrics.
- Developed an **e-commerce search optimization** system, enhancing product discoverability and boosting sales conversion rates by 25%.

Data Scientist

Kubota Tractor Corporation

Sep 2022 - Sep 2024

Remote

- Analyzed regional sales and financing data using SQL, statistical tests, and regression analysis, optimizing marketing strategies and increasing profitability by 10-15%.
- Engineered predictive models with Scikit-learn and TensorFlow, forecasting customer preferences and market trends, which drove business growth.
- Designed interactive Tableau dashboards for stakeholder engagement, applying Agile methodology for iterative improvements and data-driven decision-making.

Data Analyst Intern

Cognizant

Mar 2022 - Aug 2022

Hyderabad, India

- Processed over 5 terabytes of transactional data on AWS using SQL, ETL, and data modeling, revealing insights that guided strategic decisions and enhanced financial performance.
- Developed dynamic Power BI dashboards to support financial product development, employing A/B testing and statistical analysis to refine product innovation strategies.

Data Science Intern

The Sparks Foundation

Apr 2021 - Sep 2021

Remote

- Engineered machine learning models with Python and Excel, enhancing academic outcome predictions through exploratory data analysis and statistical modeling.

AI Intern

Smart Bridge Services with IBM

Jul 2019 - Aug 2019

Remote

- Developed a fraud detection system with 97% accuracy using XGBoost Classifier and PCA, minimizing false positives and aligning with business objectives.

SKILLS

Technical Skills	Python (Scikit-learn, Pandas, NumPy, Matplotlib), SQL, TensorFlow, Keras, PySpark
Statistical Tools	A/B Testing, Statistical Tests, Regression Analysis, Probability, Statistics
Project Management	Agile Methodology, Scrum
Cloud Platforms	AWS, Azure
Certifications	Microsoft Data Scientist, AWS Machine Learning

EDUCATION

Master of Data Science, University of the Pacific	Aug 2022 - May 2024
Bachelor of Electronics and Communications Engineering, JNTUH	Jun 2018 - Aug 2022

PROJECTS

Optimization of Agricultural Production	View Crop Recommendation System
---	---

- Led a capstone project to build a crop recommendation system using logistic regression and clustering, securing top innovation rank among 20+ projects with 93% accuracy.

Your Academic Lifeline	Discover Academic Support AI
------------------------	--

- Developed an AI student support system using LLM and RAG models for personalized recommendations.

Next-Gen CKD Healthcare Model	Learn About CKD Healthcare Model
-------------------------------	--

- Engineered a healthcare model by analyzing data for insights, integrating machine learning predictions with RAG models, and incorporating LLMs to enhance chronic kidney disease management and prediction.
